This section shows you advanced Oracle SQL techniques including views, indexes, synonyms, and sequences. Section 1. Views. Creating a view – create a new view. Drop a view – drop a view from the database. Updatable views – create updatable views. Inline views – discuss inline views. With Check Option– ensure consistency of views. Section 2. Indexes

Advanced Oracle SQL - Oracle Tutorial
Using two analytic SQL functions, width_bucket equiwidth histogram buckets and percentile_cont to median transaction size and count. This query shows us the analytic

challenges inherent in data warehouse designs: because the sh data does not include entries for every transaction, nor a count of transactions, we are forced to make an assumption. In this query, we will make the minimalist interpretation and assume that all products sold to a single customer through a single channel on a single ...

Advanced SQL Functions in Oracle 10g (Wordware ...

The list of Oracle/PLSQL functions is sorted into the type of function based on categories such as string/character, conversion, advanced, numeric/mathematical, and date/time. These functions can be used in SQL statements or queries in Oracle. Or, they can be used within the programming environment provided by the Oracle/PLSQL database, such as stored procedures, functions, triggers, etc.

Oracle / PLSQL: Functions - Listed by Category

The PL/SQL optimize level determines how much the PL/SQL optimizer can rearrange code for better performance. This level is set with the compilation parameter PLSQL_OPTIMIZE_LEVEL, which is described in Oracle Database Reference. For more information, see Section 11.3.1, "PLSQL_OPTIMIZE_LEVEL Compilation Parameter."

Advanced PL/SQL Features - Oracle
SELECT CONNECTION_ID(); Output: CURRENT_USER(): It returns the user name and host name for the MySQL account used by the server to authenticate the current client. Syntax: SELECT CURRENT_USER(); Output: DATABASE(): It returns the name of the default database. Syntax: SELECT DATABASE(); Output: IF(): It returns one value if a condition is TRUE, or another value if a condition is FALSE.
