Although there are a number of comprehensive books in clinical microbiology, there remains a need for a manual that can be used in the clinical laboratory to guide the daily performance of its work. Most of the existing publications provide detailed

and precise information, for example, by which a microorganism can be characterized and identified beyond any doubt; however, the number of tests involved in this process exceeds the capabilities and resources of most clinical laboratories and are irrelevant for patient care. It is, therefore,

necessary in any clinical laboratory to extract from reference manuals, textbooks, and journals those tests and procedures that are to be used to complete the daily workload as efficiently and accurately as possible. It is also essential in the clinical laboratory to determine, on the basis
