Over forty years have passed since Allied armies landed in Normandy with the purpose of liberating western Europe and destroying Hitler's Third Reich. Despite this passage of time and extensive writings on the landings in France, officers and historians are still intensely interested in D-Day and the Normandy campaign. Indeed, a great deal remains to be learned about the U.S. Army's participation in the Normandy campaign, and a detailed examination of the fighting yields a fruitful case study for America's professional officer corps concerning how American soldiers performed in combat, how squads and platoons closed with and destroyed the enemy, and how the Army adapted methods to overcome a whole host of problems that it encountered in combat. This study attempts to identify the problems that hampered the operations of the U.S. First Army during the weeks immediately following the D-Day landings. in Normandy, inexperienced American combat units struggled with veteran German defenders on terrain specially suited for the defense. The U.S. Army was faced with the problem of conducting offensive operations in the Normandy hedgerow country- known as the Bocage. Shortcomings in preinvasion training and preparation resulted initially in uncoordinated efforts whenever American infantry, tanks, and artillery tried to combine forces during attacks.

of noise exposure necessary to cause hearing loss or tinnitus, risk factors for noise-induced hearing loss and tinnitus, the timing of the effects of noise exposure on hearing, and the adequacy of military hearing conservation programs and audiometric testing. The book stresses the importance of conducting hearing tests (audiograms) at the beginning and end of military service for all military personnel and recommends several steps aimed at improving the military services'™ prevention of and surveillance for hearing loss and tinnitus. The book also identifies research needs, emphasizing topics specifically related to military service.

CMH Publication 70-30. Edited by Frank N. Schubert and Theresa L. Kraus. Discusses the United States Army's role in the Persian Gulf War from August 1990 to February 1991. Shows the various strands that came together to produce the army of the 1990s and how that army in turn performed under fire and in the glare of world attention. Retains a sense of immediacy in its approach. Contains maps which were carefully researched and compiled as original documents in their own right. Includes an index.

Electronic Access Control introduces the fundamentals of electronic access control through clear, well-illustrated explanations. Access Control Systems are difficult to learn and even harder to master due to the different ways in which manufacturers approach the subject and the myriad complications associated with doors, door frames, hardware, and electrified locks. This book consolidates this information, covering a comprehensive yet easy-to-read list of subjects that every Access Control System Designer, Installer, Maintenance Tech or Project Manager needs to know in order to develop quality and profitable Alarm/Access Control System installations. Within these pages, Thomas L. Norman - a master at electronic security and risk management consulting and author of the industry reference manual for the design of Integrated Security Systems - describes the full range of EAC devices (credentials, readers, locks, sensors, wiring, and computers), showing how they work, and how they are installed. A comprehensive introduction to all aspects of electronic access control Provides information in short bursts with ample illustrations Each chapter begins with outline of chapter contents and ends with a quiz May be used for self-study, or as a professional reference guide

This study measures wartime claims against actual results of the British bombing campaign against Germany in the Great War. Components of the Royal Naval Air Service (RNAS), the Royal Flying Corps (RFC), and the Royal Air Force (RAF) conducted bombing raids between July 1916 and the Armistice. Specifically, Number 3 Wing (RNAS), 41 Wing of Eighth Brigade (RFC), and the Independent Force (IF) bombed German targets from bases in France. Lessons supposedly gleaned from these campaigns heavily influenced British military aviation, underpinning RAF doctrine up to and into the Second World War. Fundamental discrepancies exist, however, between the official verdict and the first-hand evidence of bombing results gathered by intelligence teams of the RAF and the US Air Service. Results of the British bombing efforts were demonstrably more modest, and costs in casualties and wastage far steeper, than previously acknowledged. A preoccupation with "moral effect" came to dominate the British view of their aerial offensives. Maj Gen Hugh M. Trenchard played a pivotal role in bringing this misperception to the forefront of public consciousness. After the Armistice, the potential of strategic bombing was officially extolled to justify the RAF as an independent service. The Air Ministry's final report must be evaluated as a partisan manifestation of this crusade and not as a definitive final assessment, as it has been mistakenly accepted previously. This study develops and substantiates a comprehensive evaluation of British long-range bombing in the First World War. Its findings run directly counter to the generally held opinion. Natural limitations, technical shortfalls, and aircrews lacking proficiency acted in concert with German defenses to produce far less results than those claimed.
