How to study immunology | Immune System: Overview
~~Immunology And Serology In Laboratory~~

Serology is the study of blood serum (the clear fluid that separates when blood clots). Immunology and serology laboratories focus on the following: Identifying antibodies. These are proteins made by a type of white blood cell in response to a foreign substance (antigen) in the body. Investigating problems with the immune system.

serology blood test is performed to detect and measure the levels of antibodies as a result of exposure to a particular bacteria or virus. When people are exposed to bacteria or viruses (antigens), their body ' s immune system produces specific antibodies against the organism. Antibody levels (antibody titer) help physicians determine whether infection occurred recently or years ago.
