Zac and Marvin admire Edie, the pretty new neighbor, but are wary of her strange-looking twin sisters who hang around the swamp.

Responding to the growing importance of, and interest in, wetland ecosystems, here is a complete introduction to wetland ecosystem types and modeling. Drawn from Bill Mitsch's encyclopedic *Wetlands*, this text provides a basic introduction to ecosystems, wetland ecosystems, and systems ecology and modeling. Revising original chapters and adding new content to include the latest research finding and regulatory requirements, the book presents in-depth coverage of the seven dominant wetland ecosystem types found worldwide. With foundational information on every aspect of wetland ecosystems, this is an ideal supplemental text for advanced courses as well as introductory ecology courses.

In a world filled with breathtaking beauty, we have often overlooked the elusive magic of certain landscapes. A cloudy river flows into an Arctic wetland where sandhill cranes and muskoxen dwell. Further south, cypress branches hang low over dismal swamps. Places like these—collectively known as swamplands or peatlands—often go unnoticed for their ecological splendor. They are as globally significant as rainforests, yet, because of their reputation as wastelands, they are being systematically drained and degraded. *Swamplands* celebrates these wild places, as journalist Edward Struzik highlights the unappreciated struggle to save peatlands by scientists, conservationists, and landowners around the world. An ode to peaty landscapes in all their offbeat glory, the book is also a demand for awareness of the myriad threats they face. It inspires us to see the beauty and importance in these least likely of places. Our planet's survival might depend on it.

Realistically rendered illustrations of 25 fascinating creatures: swamp rabbit, spotted turtle, manatee, snowy egret, and more.

Understand the current concept of wetland and methods for identifying, describing, classifying, and delineating wetlands in the United States with *Wetland Indicators* - capturing the current state of science's role in wetland recognition and mapping. Environmental scientists and others involved with wetland regulations can strengthen their knowledge about wetlands, and the use of various indicators, to support their decisions on difficult wetland determinations. Serial murders, hate crimes and torture... Who would have expected such violence in the quiet countryside of Hernando County, Florida? Initially covered by award winning reporter Patricia Lieb during her tenure with The Daily Sun Journal, she recounts these and other shocking true crime events in MURDERS IN THE SWAMPLAND. Putting a face on big crimes in the Nature Coast is what Patricia Lieb has done in her book, MURDERS IN THE SWAMPLAND. Chris Van Ormer, Citrus County Chronicle ...all of them are true. All of them terribly grizzly. All of them ripped from the front page headlines of area newspapers. Lara Bradburn, Hernando Today

Arguing that the pursuit of happiness is futile, the Jungian perspective asserts that the goal of life is not in happiness, but in meaning which is real, rather than a fruitless ideal. This book shows how to find life's dignity by uncovering its deepest meaning and discovering errors made.

In these nine evocative essays, Barbara Hurd explores the seductive allure of bogs, swamps, and wetlands. Hurd's forays into the land of carnivorous plants, swamp gas, and bog men provide fertile ground for rich thoughts about mythology, literature, Eastern spirituality, and human longing. In her observations of these muddy environments, she finds ample metaphor for human creativity, imagination, and fear.

□ As the 20th century began, swamps with immense timber resources covered much of the Missouri Bootheel. After investors harvested the timber, the landscape became overgrown. The conversion of swampland to farmland began with small drainage projects but complete reclamation was made possible by a system of ditches dug by the Little River Drainage District—the largest in the U.S., excavating more earth than for the Panama Canal. Farming quickly took over. The devastation of Southern cotton fields by boll weevils in the early 1920s brought to the cooler Bootheel an influx of black and white sharecroppers and cotton became the principal crop. Conflict over New Deal subsidies to increase cotton prices by reducing production led to the 1939 Sharecropper Demonstration, foreshadowing civil rights protests three decades later.
