A guide to the protection of electrical equipment from electrical shock. It is part of a series of manuals designed to amplify the particular requirements of a part of the 16th Edition Wiring Regulations. Each of the guides is extensively cross-referenced to the Regulations thus providing easy access. Some Guidance Notes contain information not included in the 16th Edition but which was included in earlier editions of the IEE Wiring Regulations. All the guides have been updated to align with BS 7671:2001.

The latest edition of this text is the go-to book on rapid response systems (RRS). Thoroughly updated to incorporate current principles and practice of RRS, the text covers topics such as the logistics of creating an RRS, patient safety, quality of care, evaluating program results, and engaging in systems research. Edited and written by internationally recognized experts and innovators in the field, Textbook of Rapid Response Systems: Concepts and Implementation, Second Edition is a valuable resource for medical practitioners and hospital administrators who want to implement and improve a rapid response system.

Introduction to Mechatronic Design is ideal for upper level and graduate Mechatronics courses in Electrical, Computing, or Mechanical & Aerospace Engineering. Unlike other texts on mechatronics that focus on derivations and calculations, Introduction to Mechatronics, 1e, takes a narrative approach, emphasizing the importance of building intuition and understanding before diving into the math. The authors believe that integration is the core of mechatronics and students must have a command of each of the domains to create the balance necessary for successful mechatronic design and devote sections of the book to each area, including mechanical, electrical, and software disciplines, as well as a section on system design and engineering. A robust package of teaching and learning resources accompanies the book.

Kangaroo mother care is a method of care of preterm infants which involves infants being carried, usually by the mother, with skin-to-skin contact. This guide is intended for health professionals responsible for the care of low-birth-weight and preterm infants. Designed to be adapted to local conditions, it provides guidance on how to organize services at the referral level and on what is needed to provide effective kangaroo mother care.

Health care in the twenty-first century requires intensive use of technology in order to acquire and analyze data and manage and disseminate information. No area is more data intensive than the neurointensive care unit. Despite the massive amount of data, however, providers often lack interpretable and actionable information. This book reviews the concepts underlying the emerging field of neurocritical care informatics, with a focus on integrated data acquisition, linear and nonlinear processing, and innovative visualization in the ICU. Subjects addressed in individual chapters are thus wide ranging and encompassing, for example, multimodal and continuous EEG monitoring and data integration, display of data in the ICU, patient-centered clinical decision support, optimization of collaboration and workflow, and progress towards an "integrated medical environment". All of the nine chapters have been written by international thought leaders in the field.

This NAO report examines the reorganisation of neonatal services in England, and has set out a number of facts in regard of baby births. In 2006, 635,748 babies were born in England, with 62,471 babies, approximately 10% of all births admitted to neonatal units. Babies require neonatal care because they are premature, have a low birth weight or suffer from illness or a condition, such as a heart defect. The NAO also states that there is a trend in low weight babies increasing in the UK and other developed countries. Premature babies are the result of a number of factors, including maternal age, obesity, smoking, ethnic origin, deprivation and assisted conception such as IVF. Also, the number of women giving birth at 40 years of age or more has more than doubled since 1986. The NAO has set out a number of findings and recommendations, including: that there is a widespread support for neonatal services to be delivered through managed clinical networks, but these networks have evolved at different rates; most clinical networks have made progress in reducing long-distance transfers, but only half provide specialist transport services 24 hours a day, seven days a week; that there has been an improvement in communication between clinical networks; that there are still capacity problems that undermine the effectiveness and efficiency of neonatal care, and that this is often due to a shortage of nurses; that a greater account should be taken of parent's needs when neonatal care is required, such as communication with medical staff, information about the babies' care and accommodation for the parents; the costs of neonatal services are not fully understood, and there is a mismatch between costs and charges.

this concise book covers all aspects of neonatal resuscitation from the moment of birth to transfer to the neonatal unit. It discusses special considerations, and communication with parents and other professionals. The advice has been drawn up by a working party, giving it the authority of a distinguished body of specialists.

Infrared thermal imaging is a rapid and non-invasive procedure for mapping skin temperature distribution of the human body. Advanced software and high-resolution infrared detectors has allowed for a renaissance in the use of thermography in medical research and practice. The combined expertise from a number of centres is used to create this book that will be invaluable for recommended reading for practising and training radiographers, medical physicists and clinicians.
