What Are the Moai Statues of Easter Island?

Print. Rapa Nui (or Easter Island , as it is commonly known) is home to the enigmatic Moai, stone monoliths that have stood watch over the island landscape for hundreds of years. Their existence is a marvel of human ingenuity -- and their meaning a source of some mystery. Ancient Rapanui carvers worked at the behest of the elite ruling class to carve nearly 1,000 Moai because they, and the community at large, believed the statues capable of producing agricultural fertility and thereby ...

Easter Island's Statues Reveal Bodies ... - Ancient Pages

Mo'ai /'moʊ.aɪ/, or moai, are monolithic human figures carved by the Rapa Nui people on Easter Island in eastern Polynesia between the years 1250 and 1500. Nearly half are still at Rano Raraku, the main mo'ai quarry, but hundreds were transported from there and set on stone platforms called ahu around the island's perimeter. Almost all mo'ai have overly large heads three-eighths the size of the whole statue. The mo'ai are chiefly the living faces of deified ancestors. The statues ...

Easter Island Moai: Mystery behind ancient statues revealed

Statues of Easter Island (Ancient Wonders) [Raum, Elizabeth] on Amazon.com. \*FREE\* shipping on qualifying offers. Statues of Easter Island (Ancient Wonders)

The monumental statues of Easter Island, both so magisterial and so forlorn, gazing out in their imposing rows over the island's barren landscape, have been the source of great mystery ever since the island was first discovered by Europeans on Easter Sunday 1722. How could the ancient people who inhabited this tiny speck of land, the most remote in the vast expanse of the Pacific islands, have built such monumental works? No such astonishing numbers of massive statues are found anywhere else in the Pacific. How could the islanders possibly have moved so many multi-ton monoliths from the quarry inland, where they were carved, to their posts along the coastline? And most intriguing and vexing of all, if the island once boasted a culture developed and sophisticated enough to have produced such marvelous edifices, what happened to that culture? Why was the island the Europeans encountered a sparsely populated wasteland? The prevailing accounts of the island's history tell a story of self-inflicted devastation: a glaring case of eco-suicide. The island was dominated by a

powerful chieftom that promulgated a cult of statue making, exercising a ruthless hold on the island's people and rapaciously destroying the environment, cutting down a lush palm forest that once blanketed the island in order to construct contraptions for moving more and more statues, which grew larger and larger. As the population swelled in order to sustain the statue cult, growing well beyond the island's agricultural capacity, a vicious cycle of warfare broke out between opposing groups, and the culture ultimately suffered a dramatic collapse. When Terry Hunt and Carl Lipo began carrying out archaeological studies on the island in 2001, they fully expected to find evidence supporting these accounts. Instead, revelation after revelation uncovered a very different truth. In this lively and fascinating account of Hunt and Lipo's definitive solution to the mystery of what really happened on the island, they introduce the striking series of archaeological discoveries they made, and the path-breaking findings of others, which led them to compelling new answers to the most perplexing questions about the history of the island. Far from irresponsible environmental destroyers, they show, the Easter Islanders were remarkably inventive environmental stewards, devising ingenious methods to enhance the island's agricultural capacity. They did not devastate the palm forest, and the culture did not descend into brutal violence. Perhaps most surprising of all, the making and moving of their enormous statues did not require a bloated population or tax their precious resources; their statue building was actually integral to their ability to achieve a delicate balance of sustainability. The Easter Islanders, it turns out, offer us an impressive record of masterful environmental management rich with lessons for confronting the daunting environmental challenges of our own time. Shattering the conventional wisdom, Hunt and Lipo's ironclad case for a radically different understanding of the story of this most mysterious place is scientific discovery at its very best.

On a long stretch of green coast in the South Pacific, hundreds of enormous, impassive stone heads stand guard against the ravages of time, war, and disease that have attempted over the centuries to conquer Easter Island. Steven Roger Fischer offers the first English-language history of Easter Island in *Island at the End of the World*, a fascinating chronicle of adversity, triumph, and the enduring monumentality of the island's stone guards. A small canoe with Polynesians brought the first humans to Easter Island in 700 CE, and when boat travel in the South Pacific drastically decreased around 1500, the Easter Islanders were forced to adapt in order to survive their isolation. Adaptation, Fischer asserts, was a continuous thread in the life of Easter Island: the first European visitors, who viewed the awe-inspiring monolithic busts in 1722, set off hundreds of years of violent warfare, trade, and disease—from the smallpox, wars, and Great Death that decimated the island to the late nineteenth-century Catholic missionaries who tried to "save" it to a despotic Frenchman who declared sole claim of the island and was soon killed by the remaining 111 islanders. The rituals, leaders, and religions of the Easter Islanders evolved with all of these events, and Fischer is just as attentive to the island's cultural developments as he is to its foreign invasions. Bringing his history into the modern era, Fischer examines the colonization and annexation of Easter Island by Chile, including the Rapanui people's push for civil rights in 1964 and 1965, by which they gained full citizenship and freedom of movement on the island. As travel to and interest in the island rapidly expand, *Island at the End of the World* is an essential history of this mysterious site.

From the author of *Guns, Germs and Steel*, Jared Diamond's *Collapse: How Societies Choose to Fail or Survive* is a visionary study of the mysterious downfall of past civilizations. Now in a revised edition with a new afterword, Jared Diamond's *Collapse* uncovers the secret behind why some societies flourish, while others founder - and what this means for our future. What happened to the people who made the forlorn long-abandoned statues of Easter Island? What happened to the architects of the crumbling Maya pyramids? Will we go the same way, our skyscrapers one day standing derelict and overgrown like the temples at Angkor Wat? Bringing together new evidence from a startling range of sources and piecing together the myriad influences, from climate to culture, that make societies self-destruct, Jared Diamond's *Collapse* also shows how - unlike our ancestors - we can benefit from our knowledge of the past and learn to be survivors. 'A grand sweep from a master storyteller of the human race' - Daily Mail 'Riveting, superb, terrifying' - Observer 'Gripping ... the book fulfils its huge ambition, and Diamond is the only man who could have written it' - Economist 'This book shines like all Diamond's work' - Sunday Times

Provides an overview of what archaeologists know about the ancient carved structures of Easter Island and the people who created them.

On Easter in 1722, a fleet of Dutch ships exploring the southeastern Pacific Ocean came across a small island that at first seemed uninhabited. Instead, the sailors found a community of people—and hundreds of giant stone statues. Easter Island and its statues have long been a source of mystery for explorers, historians, and tourists. How did people come to live in such a remote place? How had the islanders carved such enormous statues without metal tools? And how had they moved them? Read all about the myths and theories surrounding Easter Island, as well as the science researchers are using to learn more.

"An exploration of the questions and mysteries that have puzzled scholars and experts about the remote location of Easter Island, including its culture, giant statues, and writing. Features include a map, fact boxes, biographies of famous experts on Easter Island, places to see and visit, a glossary, further readings, and index"--

A history of Easter Island and the Rongorongo writing system.

Describes the formation, geography, ecology, and inhabitants of the isolated Easter Island in the Pacific Ocean.

Easter Island is famous for its 887 monumental statues. Nobody really knows who made those statues, or how or why. New Theories are being advanced, new studies made and new books published about this all the time. It is the only book that adequately explains how the giant statues were created and how they were transported. Basically, the statues were cut from the lips of the three volcanoes on the island. This still does not answer the question of how they were brought down to the water's edge.

The Public Broadcasting Service (PBS) offers online supplements to the "NOVA" program "Secrets of Easter Island." This supplement provides information about ancient navigation and the transportation methods of the first inhabitants of Easter
