Excerpt from Standard American Poultry Book: Containing Descriptions of All the Different Varieties of Fowls, With Complete Instructions for Raising All Kinds of Poultry, Curing Diseases, Artificial Incubation, Etc. Etc The pullets attain full size at an early age, and are in their prime when eight months old. Brahmas are doubtless the largest of all the varieties of domestic fowls; some have been known to weigh seventeen pounds, which exceeds the weight of any other breed. Light Brahma, Cock And Hen. The dark Brahmas have steadily progressed in favor since their first introduction; their gigantic size, great weight, hardihood and prolificacy, and the ease with which they can be kept in confined ranges, all tend to render them much esteemed. To sum up their merits, as good, useful, hardy fowls, they are unsurpassed. They are good layers of good sized eggs, good foragers and good sitters; as mothers they cannot be excelled, no fowls being more careful not to step on their chickens, brooding them better, or searching more diligently for food. What does it take to raise a happy pig? Armed with experience from running the largest organic hog operation in Maine, author Alice Percy is well equipped to answer this question. Pigs are much closer to their cousin, the wild boar, than other domesticated animals. Ethically managing pigs requires an understanding of their natural mannerisms, including factors such as social grouping, mating, territory, housing, and, of course, their love of wallowing in the mud. In Happy Pigs Taste Better Percy offers a comprehensive look at raising organic, pasture-fed, gourmet meat. She advises readers on pasturing and feeding hogs organically, as well as managing the breeding herd and administering effective natural healthcare. In addition, she provides an overview of marketing and distribution for those looking to turn their hog farming operation into a lucrative business. This book is the first of its kind to offer an in-depth approach to organic, high-welfare commercial production, including information on: - Designing a hog business from the ground up - Housing pigs, including benefits and drawbacks of various housing systems - Evaluating the nutritional content of common organic feedstuffs - Butchering humanely and economically - Recordkeeping, with templates for financial tracking Whether you ' re looking to convert a conventional operation to organic, grow your backyard hog operation into a viable business, or start from scratch, this comprehensive book has got you covered, nose to tail.

Since the beginning of the twentieth century, cancer rates have increased exponentially - now affecting almost 50 percent of the American population. Conventional treatment continues to rely on chemotherapy, surgery, and radiation to attack cancer cells. Yet research has repeatedly shown that 95 percent of cancer cases are directly linked to diet and lifestyle. The Metabolic Approach to Cancer is the book we have been waiting for - it offers an innovative, metabolic-focused nutrition protocol that actually works. Naturopathic, integrative oncologist and cancer survivor and nutrition therapist Jess Higgins Kelley have identified the ten key elements of a person's "terrain" (think of it as a topographical map of our body) that are crucial to preventing and managing cancer. Each of the terrain ten elements - including epigenetics, the microbiome, the immune system, toxin exposures, and blood sugar balance - is illuminated as it relates to the cancer process, then given a heavily researched and tested, non-toxic and metabolic, focused nutrition prescription. The ketogenic diet - which relies on the body's production of ketones as fuel - is the centerpiece of The Metabolic Approach to Cancer. Further, Winters and Kelley explain how to harness the anticancer potential of phytonutrients abundant in low-glycemic plant and animal foods to address the 10 hallmarks of cancer - an approach Western medicine does with drug based therapies.Their optimized, genetically-tuned diet shuns grains, legumes, sugar, genetically modified foods, pesticides, and synthetic ingredients while emphasizing whole, wild, local, organic, fermented, heirloom, and low-glycemic foods and herbs. Other components of their approach include harm-reductive herbal therapies like mistletoe (considered the original immunotherapy and common in European cancer care centers) and cannabinoids (which shrink tumors and increase quality of life, yet are illegal in more than half of the United States). Through addressing the ten root causes of cancer and approaching the disease from a nutrition-focused standpoint, we can slow cancer's endemic spread and live optimized lives.
